Instructions for Plastisolve

Catalog Number: 13050

1. Submerge part totally in plastisolve or fill container to necessary level.
2. Cover vessel to minimize evaporation.
3. Allow to stand for at least 8 hours.
4. Remove part or drain plastisolve into a stock bottle.

Note!! Plastisolve can be used indefinitely. Merely strain crumbled plastic and re-use.

Plastisolve does not destroy nylon, Formvar, phenolics, metals, glass and other similar materials. It is a most effective solvent for epoxy and polyester resins.
